

# **Against Subsidised Windfarms Around Rugby**

**www.aswar.org.uk**

**Please do not allow apathy to win!**

Rugby Borough planners have spent £18,000 on consultants from Cardiff to tell them where the landscape around Rugby could be suitable for wind turbines.

These consultants are reporting their initial draft views to a public meeting.

This gives everybody an opportunity to show their concern about the building of enormous, inefficient, industrial wind turbines around Rugby

**ASWAR is inviting everybody to join in having a photograph taken  
on the steps of Rugby town hall, before this public meeting at  
7pm Thursday Jan 27<sup>th</sup>**

It is vital as many people as possible (children included!) show the politicians that these turbines and their high costs on our fuel bills are not wanted, by attending this photo opportunity.

Remember a Government energy policy based on subsidised windfarms, will increase electricity prices and fuel poverty, reduce property values, devastate historic rural landscapes, increase serious health hazards, destroy amenity and wildlife, without any chance of altering atmospheric CO<sup>2</sup> concentrations, still less of deflecting climate change. **Check out the website [www.aswar.org.uk](http://www.aswar.org.uk)**

**Please put it in your diary now. Why not ask your neighbour to come with you?**

There is plenty of car parking behind the town hall which is at the bottom of North St.
